Recorlev®
(levoketoconazole)

CUSHING'S MENTORCONNECT™

YOUR CUSHING'S JOURNEY
You don't have to navigate it alone

Connect one-on-one with someone who understands the journey

Cushing's MentorConnect™ is a peer-to-peer program that allows adult patients living with Cushing's and their caregivers the opportunity to talk with another patient who has experience with Cushing's and navigating treatment with RECORLEV® (levoketoconazole).

Indication

RECORLEV (levoketoconazole) is a prescription medicine used to treat high cortisol levels in adult patients with Cushing's syndrome who cannot have surgery or who have had surgery that did not cure their Cushing's syndrome. RECORLEV is not to be used for treatment of fungal infections.

Please see Important Safety Information throughout, including Boxed Warning for liver damage and heart rhythm problems. For more information, see Medication Guide and full Prescribing Information for RECORLEV or at RECORLEV.com.

Real People. Different Experiences. Ongoing Support.

Living with Cushing's syndrome can affect many aspects of your everyday life, including physical, emotional, and psychological well-being.

Cushing's MentorConnect™ facilitates having a one-on-one conversation with someone who has personal experience navigating Cushing's. Having a conversation with someone who understands the journey may empower you as you continue on your own journey. The mentor program is here to support eligible patients throughout their entire journey — from experiencing signs and symptoms of Cushing's, to considering treatment options, to navigating life on treatment.

A Cushing's Mentor is someone who lives with Cushing's, takes RECORLEV® (levoketoconazole), and can share their journey to **encourage you through yours**. Cushing's MentorConnect™ creates the opportunity for anyone impacted by Cushing's – individuals like you — to connect with a Cushing's Mentor.

Having a conversation with a Mentor can help you along your journey and make a difference by helping you feel understood and connected and offering new perspectives.

Common Mentor call topics include:

- Navigating daily life with Cushing's
- Journey from testing to diagnosis
- Self-advocating with your care team
- Mentor's experience taking RECORLEV

Emily
Living with Cushings syndrome
On RECORLEV since 2022

Kim
Living with Cushings syndrome

Important Safety Information

- **RECORLEV can cause serious side effects, including:**
  - **Liver damage (hepatotoxicity): Some people who were treated with ketoconazole, a medicine like the active ingredient in RECORLEV, had serious liver problems that required a liver transplant or led to death**
    - **Call your doctor right away if you have pain on the upper right side of your stomach area associated with nausea, unusual fatigue, yellowing of your skin or the whites of your eyes, or unusual bruising or bleeding**

Please see additional Important Safety Information on pages 3 and 4. For more information, see Medication Guide and full Prescribing Information for RECORLEV or at RECORLEV.com.

Getting started is simple.

Every journey is unique; you don't have to navigate it alone.

Important Safety Information (Cont'd)

- **RECORLEV can cause serious side effects: (Cont'd)**
  - **Heart rhythm problems (QT prolongation): QT prolongation can cause irregular heartbeats that can be life-threatening**
    - **Call your doctor right away if you feel severe lightheadedness or if you faint**

Please see additional Important Safety Information on pages 2 and 4. For more information, see Medication Guide and full Prescribing Information for RECORLEV or at RECORLEV.com.

Important Safety Information (Cont'd)

- **RECORLEV can cause serious side effects, including: (Cont'd)**
  - o Low cortisol levels (adrenal insufficiency): RECORLEV may cause adrenal insufficiency by excessively lowering production of cortisol
    - ▪ Call your doctor right away if you have nausea, vomiting, dizziness, unusual fatigue, low blood pressure, unexplained stomach pain, abnormal electrolyte levels, loss of appetite, low blood sugar, or body aches
- Do not take RECORLEV if you:
  - o Have cirrhosis, active or poorly controlled liver disease, frequent stones in gallbladder, or history of liver problems due to use of a drug
  - o Take certain medicines that cause QT prolongation or may affect how your liver works, such as CYP3A4 inhibitors
  - o Have a history of certain heart problems, which may include one of the following conditions: torsades de pointes, ventricular tachycardia, ventricular fibrillation, or long QT syndrome
  - o Are allergic to levoketoconazole, ketoconazole, or any of the ingredients in RECORLEV
- Serious allergic reactions can happen in people who take RECORLEV, including rash, itching, hives, fever, swelling of the lips or tongue, chest pain, or trouble breathing
- RECORLEV may lower testosterone levels. For males, symptoms include breast enlargement and erectile dysfunction. For females, symptoms include low desire for sex and mood changes
- The most common side effects of RECORLEV include nausea, vomiting, low potassium, easy bleeding or bruising, high blood pressure, headache, liver injury, abnormal uterine bleeding, redness of the skin, fatigue, abdominal pain or upset stomach, arthritis, upper respiratory infection, muscle pain, abnormal heart rhythm, back pain, sleep disturbances, and fluid retention
- Before taking RECORLEV, tell your doctor about your medical conditions, medicines you take, and if you are breast feeding or plan to. RECORLEV may cause fertility problems in females and males, which may affect ability to have children
- You are encouraged to report side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088

Please see additional Important Safety Information on pages 2 and 3. For more information, see Medication Guide and full Prescribing Information for RECORLEV or at RECORLEV.com.
